Subject Index

AAS, with tunable semiconductor diode lasers 333
AAS, sample introduction devices 336
α_1-Acid glycoprotein 251
α_1-Acid glycoprotein as enantiomeric selector of drugs 251
Acylcarnitines, determination in biological fluids 184
Analytical chemistry, citation analysis 1
Analytical chemistry, national research activities 316
Analytical chemistry, national research performances 281
Analytical chemistry, undergraduate education 315
Analytical R&D in the pharmaceutical industry 43
APL, processing of spark source MS data 88
ARTHUR, adaptation for microcomputers 326
Atomic resolution analysis, use of scanning tunneling microscopy 230
Auger electron spectroscopy, application to environmental samples 379
Auger electron spectroscopy, high spatial resolution, use in materials science 215
Automatic precipitation–dissolution 34

Basic drugs, HPLC on cyanopropyl-bonded phases 96
Biological fluids, analysis by high-field Fourier transform NMR 368
Biomass detection 12
Biopolymer determinations by HPLC with low angle laser light scattering photometry 260
Biopolymers, structural analysis by FAB-MS 375
Biosensors 12
Biotechnology, analytical strategies, sensors and control 12
Bonded silicas, use in sample preparation 134

Calibration lines, software to compare slopes 49
Calibration lines, validation method 8
Carbohydrates, FAB-MS 375
Carboxylic acids, derivatization using micellar catalysis 268
Chemical sensors, for 'intelligent' instruments 58
Chemometrics, ARTHUR program adapted for microcomputers 326
Chemometrics, display methods for dendrograms 289
Chromatography, eumelanin-related indolic compounds 177
Citation analysis, analytical chemistry 281, 316
Citation analysis of papers in analytical chemistry 1
Cluster analysis, fuzzy 249
Consultants, practical advice for 154
Continuous addition of reagent technique, use in routine analysis 302
Continuous flow systems, automatic precipitation–dissolution 34
Contract analytical services 81
Cook's distance, detection of outliers 8
Cyanopropyl-bonded phases, HPLC of basic drugs 96

Data matrices, display in the alphanumeric mode 161
Dendrograms, display methods 289
Direct injection, HPLC of complex mixtures 166
Dispersion of solutes in FIA 323
DNA fingerprinting 12
DNA probes 12
Doehlert uniform shell design for the analytical laboratory 126
Drug monitoring, free drug levels 107
Drugs, determination in urine and serum by LC 362
Drugs, enantiomeric separation with α_1-acid glycoprotein as chiral selector 251

Education in analytical chemistry at the undergraduate level 315
Eicosanoids, TLC 67
Electrochemistry, *in situ* coupling with MS 328
Electrokinetic chromatography 129
Electromagnetic fields, imaging by electron holography 226
Electron holography 226
Enantiomeric separation of drugs and related compounds 251
Environment, mercury in natural waters 339
Environmental analysis, GC–FTIR 52
Environmental analysis, speciation of mercury 339
Environmental samples, surface analysis 379
Enzyme assays, acylcarnitines 184
Enzyme sensors 12
Enzymes, microbial, use in monitoring of tumour cell growth 298
Eponymic concepts in analytical chemistry 158
Equilibrium dialysis, separation of free drugs 107
Eumelanin-related indolic compounds, chromatography 177

FAB-MS, acylcarnitines 184
FAB-MS, applications to proteins and carbohydrates 375
FAB-MS, interfacing to capillary HPLC 25
Factorial design, Doehlert uniform shell design 126
FIA, dispersion of solutes 323
FIA, kinetic methods 172
FIA, wet-chemical flow analyzers for process control 62
Field-emission electron microscopy 226
Fluorine NMR, use in drug metabolism studies 368
Food analysis, immunoassays 112
FTIR, analysis of thin solid films 222
Fuzzy clustering, principal components 249

GC, analysis of lipids 308
GC, on-line coupling with HPLC 162
GC–FTIR, environmental analysis 52
GC–MS, acylcarnitines 184

High-field Fourier transform NMR analysis of biological fluids 368
High-resolution solid-state NMR of silicates and zeolites 343

Abbreviations of techniques

AAS	atomic absorption spectrometry
FAB	fast atom bombardment
FIA	flow injection analysis
FTIR	Fourier transform infrared spectroscopy
GC	gas chromatography
HPLC	high-performance liquid chromatography
MS	mass spectrometry
NMR	nuclear magnetic resonance spectrometry
TLC	thin-layer chromatography

HPLC, acylcarnitines 184
HPLC, analysis of lipids 308
HPLC, cyanopropyl-bonded phases for the analysis of basic drugs 96
HPLC, on-line combination with micellar phase-transfer catalysis 268
HPLC, on-line coupling with GC 162
HPLC, separation of complex mixtures 166
HPLC, trace level analysis of vinca alkaloids 141
HPLC with low angle laser light scattering spectrophotometry 260
HPLC–FAB-MS, capillary, interfacing techniques 25
HPLC–FTIR, use of microcolumns 90

Immunoassay 12
Immunoassay, food analysis 112
Immunoassay, steroid hormones 72
Indolic compounds, eumelanin-related, chromatography 177
Interfaces, HPLC–GC 162
Interfacing techniques, capillary HPLC–MS 25

Kinetic FIA methods 172
Kinetic-based determinations, automated use in routine analysis 302

Lasers, use in AAS 333
LC, software-driven 273
LC, toxicological screening 362
Lipids, analysis by GC and HPLC 308
Liquid–solid extraction, new instrumentation 134
Low angle laser light scattering spectrophotometry interfaced with HPLC 260

Mahalanobis distances, calculated by a software program 357
Materials analysis, characterization of high-technology materials and processes 192
Mercury speciation in natural waters 339
Method validation, software routine to compare calibration lines 49
Method validation, software to plot calibration lines and response residuals 8
Micellar catalysis 268
Micellar phase-transfer catalysis, on-line combination with HPLC 268
Microanalysis, high-technology materials 192
Microcolumns, potential and limitations in HPLC–FTIR 90
Microsequencing, proteins and peptides 292
Mixtures, complex, separation by simple HPLC methods 166
MS, application to environmental samples 379
MS, FAB, applications to proteins and carbohydrates 375
MS, *in situ* coupling with electrochemistry 328
MS, sequencing of peptides and proteins 292
MS, spark source, data processing using APL 88
MS, sputtered neutral 203
Multinuclear solid-state NMR, silicates and zeolites 343

Nanoanalysis, high-technology materials 192
Natural waters, speciation of mercury 339
Neuropeptides, radioimmunochemical analysis 102
NMR, acylcarnitines 184
NMR, high-field Fourier, analysis of biological fluids 368
NMR, multinuclear solid-state, for silicates and zeolites 343

On-line process LC 273
Optical surface studies with second harmonic generation 235

Pattern recognition, display methods for dendrograms 289
Peak simulation, for non-segmented continuous flow systems 323
Peptides, microsequencing 292
Petrochemical analysis, use of polarography 145
Pharmaceutical analysis, Raman spectroscopy 19
Physiological matrices 268
Picosecond spectroscopy, applications 29
Polarography, use in petrochemical analysis 145
Polyamines, enzymatic assay 298
Postionization methods, in MS 203
Precipitation–dissolution, in continuous flow systems 34
Principal component analysis, use in calculating Mahalanobis distances 357
Process control, use of wet-chemical flow analyzers 62
Process LC, software-driven 273
Proteinaceous drugs, analytical R&D in the pharmaceutical industry 43
Proteins, FAB-MS 375
Proteins, microsequencing 292

Radioimmunochemical analysis, neuropeptides 102
Raman spectroscopy, analysis of corrosive liquids, inorganic and organic compounds 19

Sample introduction devices for AAS 336
Sample introduction devices for inductively coupled plasmas 336
Sample preparation use of bonded silica 134
Scanning tunneling microscopy, for atomic resolution imaging 230
Secondary ion MS 203
Semiconductor diode lasers, use in AAS 333
Sensors, for 'intelligent' instrumentation 58
Sialic acid, enzymatic assay 298
Silicates, multinuclear solid-state NMR 343
Size-exclusion chromatography, detection by low angle laser light scattering spectrophotometry 260
Size-exclusion chromatography, separation of free drugs 107
Software, adaptation of ARTHUR for microcomputers 326
Software, calculating Mahalanobis distances 357
Software, method validation, plotting calibration lines and response residuals 8
Software, peak simulation for non-segmented continuous flow systems 323
Software-driven LC 273
Spark source MS, dataprocessing using APL 88
Spectroscopy, picosecond time resolved methods 29
Sputtered neutral MS 203
Stationary phases, cyanopropyl-bonded, HPLC of basic drugs 96
Steroid hormones, immunoassay 72
Stopped-flow techniques, modular use in routine analysis 302
Surface analysis, application to environmental samples 379
Surface analysis, high-technology materials 192
Surface analysis with optical second harmonic generation 235
Synchrotron radiation, use in X-ray fluorescence analysis 209

Thickness distribution, use of electron holography 226
Thin films, solid, FTIR analysis 222
TLC, acylcarnitines 184
TLC of eicosanoids 67
Toxicological screening, use of LC 362
Tumour cell growth, monitoring using microbial enzymes 298

Ultracentrifugation, separation of free drugs 107
Ultrafiltration, separation of free drugs 107
Ultratrace bulk analysis, high-technology materials 192
Undergraduate analytical chemistry 315

Vinca alkaloids, trace level analysis 141

Wet-chemical process analyzers, future developments 62

X-ray fluorescence analysis, use of synchrotron radiation 209
X-ray photoelectron spectroscopy, application to environmental samples 379
X-ray photoelectron spectroscopy, use in materials science 215

Zeolites, multinuclear solid-state NMR 343
